What is Selenium Webdriver?

Selenium Webdriver is a powerful tool for automating interactions with web applications. It enables you to control a browser programmatically, simulating user actions such as clicking buttons, filling out forms, and navigating pages. By using Selenium Webdriver, you can automate repetitive tasks, saving time and effort in your testing process.

Why Functional Automation Testing?

Functional automation testing plays a crucial role in ensuring the quality and reliability of web applications. It involves testing the functionality of an application from a user's perspective, verifying whether it behaves as intended under various conditions. Automating these tests allows you to:

- Reduce testing time and effort
- Increase test coverage and accuracy
- Detect bugs early in the development cycle
- Improve application quality and user experience
