It involves the ability to:

- Analyze information
- Identify biases
- Evaluate evidence
- Formulate and test hypotheses
- Draw s
- Communicate your findings

Critical thinking is a skill that can be learned and improved with practice. It's a skill that is essential for success in school, work, and life.

The era of post-truth is a time when people are increasingly willing to believe things that are not true, even when there is evidence to the contrary. This is due in part to the rise of social media, which has made it easier for people to spread misinformation and propaganda.

Critical thinking is essential in the era of post-truth because it allows us to evaluate information and make sound decisions. It helps us to identify biases, evaluate evidence, and form our own s.

There are many benefits to critical thinking, including:

- Improved decision-making

- Greater understanding of the world around you
- Increased ability to communicate your ideas
- Enhanced problem-solving skills
- Greater resistance to manipulation and propaganda

There are many things you can do to improve your critical thinking skills, including:

- **Practice analyzing information.** When you come across a piece of information, take the time to analyze it. Ask yourself questions like: Who is the source of the information? What is their bias? What evidence do they provide to support their claims?
- **Identify biases.** Everyone has biases, but it's important to be aware of them so that they don't cloud your thinking. Pay attention to the ways in which your own biases might be influencing your thinking.
- **Evaluate evidence.** When you're evaluating evidence, it's important to consider both the quality and the quantity of the evidence. Ask yourself questions like: Is the evidence reliable? Is it relevant to the claim being made? Is it sufficient to support the claim?
- **Formulate and test hypotheses.** A hypothesis is a tentative explanation for a phenomenon. When you're formulating a hypothesis, it's important to be specific and testable. Once you've formulated a hypothesis, test it by gathering evidence and seeing if the evidence supports your hypothesis.
- **Draw conclusions.** Once you've gathered and evaluated the evidence, you can draw a conclusion. Your conclusion should be based on the evidence and should be logical.

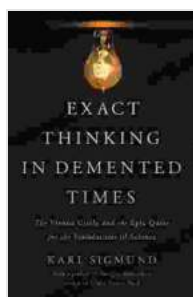

and well-reasoned.

- **Communicate your findings.** It's important to be able to communicate your findings to others. When you're communicating your findings, be clear, concise, and persuasive.

Critical thinking is a skill that takes time and practice to develop. But it's a skill that is essential for success in today's world.

In the era of post-truth, it's more important than ever to be able to think critically and make sound decisions. *Exact Thinking in Demented Times* is a book that can help you do just that. This book is a comprehensive guide to critical thinking, written by two leading experts in the field. It covers everything from the basics of logic and reasoning to more advanced topics like propaganda and persuasion.

Exact Thinking in Demented Times is a must-read for anyone who wants to be able to think for themselves and make informed decisions. It's a book that will help you navigate the era of post-truth and make sense of the world around you.
